

Setting it up

3 Plug your home phone into the UK port

Use the cable that came with your home phone.

Remember, your calls work with Internet Calls, so your phone won't work if it's connected to a phone socket.

Warning

If there's a power cut or fault with your broadband, you can't make calls including those to emergency services (999 and 112). Make sure you have another way to make emergency calls.

4 Take the power cable from the box.

Plug the blue end into the blue port on the back of your hub.

Then plug the other end into the mains and switch on.

The lights on the front of your hub should go green after a few minutes.

You're good to go.

Need more help setting up? Go to sky.com/hubsetup

Connecting your devices

Now your Sky Broadband Hub is set up, you need to connect all your devices to your broadband. Don't forget your Sky TV.

Every device is different. But here's how you usually connect to WiFi with a password:

- 1 Click or tap the WiFi icon.
- 2 Choose your network from the list and type in your password (it's on the back of your hub or Connect card).

Or, connect with WPS instead, if your device has a WPS (Wi-Fi Protected Setup™) button:

- 1 Turn on WPS on your device.
- 2 Hold the WPS button on the side of your hub for a few seconds, until it starts flashing amber.

If it works, the WPS light will go green. If it goes amber or red, it hasn't worked.

For more detailed instructions go to: sky.com/connectdevices for more help.

Settings

Login to your hub using a device that's connected to your WiFi to change your settings (like your WiFi name or password).

- 1 Type **192.168.0.1** into a browser address bar.
- 2 The username is **admin** and the password is your WiFi password (unless you've changed them).

Changing your WiFi name or password will disconnect all your devices from your WiFi, so you'll need to re-connect them. Go to sky.com/wifipassword for more info.

Resetting your hub

It's easy to reset your hub if you need to.

Hold **Reset** on the back of your hub until the power light flashes green (about 10 seconds). Don't unplug or switch off your hub while it resets. The power light will go green when it's done.

Help

Followed these steps but your hub's still not working?

- Check the **My Sky** app
- Go to sky.com/hubsetup

Security

Sky Broadband Shield

Your broadband comes with Sky Broadband Shield.

It lets you control what your family can see or do online, on any device that's hooked up to your WiFi.

And it protects you against malware and phishing websites, which could damage your devices or steal personal details.

Go to sky.com/shield to find out more.

You're in control

Go to sky.com or the **My Sky** app to manage your account, check your bills, get help and much more.

Ready.
Set.
Go.

Let's get your Sky Broadband Hub up and running.

sky broadband

Model: SR203hUK

Your activation date

Your hub won't start working until the date you see on the box - it can be any time up to midnight.

Your Sky Broadband Hub

LED status lights

WPS button and light (Wi-Fi Protected Setup™)

Find your Optical Network Terminal

Find a box that looks like this.

It's your Optical Network Terminal, or ONT. It might not look exactly like this one.

Make sure it's switched on and the Power and PON lights are green.

What's included

Sky Broadband Hub

Some paperwork

Ethernet cable

Power cable

Your hub works best if you leave it switched on all the time. Don't worry if it feels warm - that's normal.

Setting it up

- 1 Take the Ethernet cable from the box
- 2 Plug the Ethernet cable into the ONT.

Plug one end of the Ethernet cable into the fourth yellow Ethernet port. (The one with WAN above it.)

Plug the other end of the Ethernet cable into the ONT.

Turn over for the next few steps.

Warning
Please read the 'Important safety and product information' leaflet before installing or using your hub.
